Art Unit: 1772

DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 23-35, drawn to article.

Group II, claim(s) 36-43, drawn to method.

Evidence of lack of unity between the two groups is found in Rockney et al. wherein it is found to disclose the features of instant claim 23. As such, the special technical features of the claimed invention are not found to define a contribution over the prior art.

Applicant's election of Group I in Paper No. 8 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Application/Control Number: 09/890,530 Page 3

Art Unit: 1772

The term "irregularly" in claim 1 is a relative term which renders the claim indefinite. The term "irregularly" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 23-35 are rejected under 35 U.S.C. 102(b) as being unpatentable by Rockney et al. (5660899).

Rockney et al. discloses a thermal protection sheath (col.1 lines 6-7) including a substrate (col. 4 line 2), and a reflective foil (col. 2 line 11-12) fixed to the substrate (col. 4 lines 46-48) being elastically deformable form a relaxed configuration (col. 2 lines 64-67), characterized in that the foil is pleated on the substrate in the relaxed configuration and the pleats in the foil are irregularly shaped and oriented (col. 3 lines 34-35).

Rockney et al. discloses that the substrate has an outside surface provided with opening and the foil is pleated in line with the openings (figure 3 numbers 18, 19, 13).

Rockney et al. discloses that the foil is pleated inside the openings and form reserves of air (figure 3 number 13 and 18 col. 2 lines 52). Rockney et al. discloses that the substrate is made of textile and includes openings between textile threads and the foil is

pleated in line with the openings (col. 5 lines 1-2 and figure 3 numbers 18,19, and 13). Rockney et al. discloses that the substrate is formed of braided threads (col. 1 line 55-57). Rockney et al. discloses that the reflective foil is pleated between the knitted threads (col. 5 lines 7-11 and figure 3 numbers 13,18,19). Rockney et al. discloses that the substrate is a corrugated plastic material tube (col. 2 line 8). Rockney et al. discloses that the corrugated plastic material tube is slit longitudinally (col. 6 line 25). Rockney et al. discloses that the foil is pleated inside annular recesses of the corrugated tube (figure 3 number 18 and 13). Rockney et al. discloses that the substrate is tubular (col. 2 lines 7-13). Rockney et al. discloses that he substrate can be stretched elastically in the longitudinal or radial direction (col. 2 lines 64-67). Rockney et al. discloses that the reflective foil is woven form aluminized glass fibers (col. 5 line 11).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jane J Rhee whose telephone number is 703-605-4959. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Harold Pyon can be reached on 703-308-4251. The fax phone numbers for the organization where this application or proceeding is assigned are 703-305-5408 for regular communications and 703-301-9999 for After Final communications.
